WE ARE **MPGAMMA** AND WE ARE PLEASED TO MEET YOU

■ This is Our Story. A story of ingenuity, expertise, and passion.

It's the story of MPGAMMA, ours, and it began in the 1990s, when what began as an intuition became an ambitious project: giving shape to stainless steel and transforming it into solutions that protect, preserve, and last over time.

From the beginning, we aimed for something great: to become a solid and reliable point of reference for anyone who chooses our products. We specialize in the production of cabinets and enclosures for electrical panels, combining technical expertise and the ability to innovate, industrial rigor and artisanal care. A unique formula, all our own, thanks to which we have built a solid identity, the same one that has led us to become a worldwide leader.

THE STORY OF CONTINUOUS GROWTH

1997 It all began in **1997**. In an Italian factory in the heart of Emilia, a stainless-steel company was founded: MPGAMMA.

2003 In **2003**, the company moved to a new, renovated, and larger headquarters. Since then, growth has continued. With the first product certifications—TÜV SÜD IP66 in **2006** and UL Listed in **2008**—the company consolidated its technical credibility and opened new prospects in international markets.

2011 In **2011**, the company began its journey throughout Europe, attending the most important trade fairs in the sector. Over the following two years, MPGAMMA created a network of agents and distributors abroad, strengthening its presence in Europe and definitively opening the international market.

2015 **2015** brought the new TÜV SÜD IP66-IP67-IP69-IK10 certifications, further raising quality standards. The following year, SPEED was launched, the modular cabinet that would become a true flagship over the years.

2017 But MPGAMMA wasn't satisfied yet, and in **2017**, it founded the start-up SPARTA. Growth continued with the **2020** TÜV Nord ATEX EX zone 1.21

2020

certification, another step forward in ensuring safety even in the most complex environments. Two years later, the company began significant investments: it began building a new plant, introducing automated warehouses, and state-of-the-art technological systems.

2023

In **2023**, it obtained IECEX international certification, while in **2024** it celebrated two more milestones: the completion of the new production plant and its first participation in a trade fair in the United States.

2025

In **2025**, MPGAMMA opened its Chicago office, warehouse, and showroom. That same year, the company published its first sustainability report for the previous year, a concrete sign of its commitment to responsible growth.

The exponential growth of recent years is also reflected in the number of employees, which has increased from 56 in **2021** to nearly 100 in **2025**, marking the company's definitive transition to a global dimension.

Today, MPGAMMA generates 55% of its revenue abroad. This is the result of continuous growth, the fruit of courageous decisions, and constant innovation.

WHAT GUIDES US

Every business has a compass that guides it. Ours is made of vision, courage, and responsibility. We believe that growth means looking beyond today, anticipating tomorrow, and building with consistency. This is the spirit that guides us: a daily commitment to doing well, for ourselves, for our customers, and for the future.

OUR VISION

We imagine a future where innovation is not just technological progress, but the ability to provide concrete answers to the needs of people and businesses. We want to be at the forefront of this change, with a strategic vision and the strength to transform every challenge into an opportunity for shared growth.

OUR MISSION

We want to create stainless steel enclosures that are synonymous with safety, reliability, and durability. We do this by combining research and design, listening and expertise, experience and innovation. To offer solutions that make a difference, capable of meeting needs and exceeding expectations.

STAINLESS STEEL ENCLOSURES AND CABINETS

We design and manufacture stainless steel enclosures and cabinets for electrical panels, designed to serve the diverse worlds of industry.

Each product reflects our identity: it stems from attention to detail and a thorough understanding of international standards, ensuring quality and safety wherever it is used.

Our production takes place in our **Italian facility**. Here, using advanced technologies and specialized expertise, we oversee every stage: from design to shipping. We work with dedication every day to offer our customers reliable, durable, and long-lasting solutions. Stainless steel enclosures and cabinets that combine **precision, design, and solidity**, becoming silent yet essential partners in every project.

WE CULTIVATE EXCELLENCE, EVERY DAY

At MPGAMMA, **quality** is not a goal to be achieved, but the guiding principle behind every decision. Each project takes shape by listening to our customers and drawing on the experience gained over twenty-five years of experience.

With this approach, we have become an international benchmark in complex and demanding sectors such as **Oil & Gas, Food & Beverage, Pharmaceuticals, Cosmetics, Chemicals, Infrastructure, and Packaging**. Because behind every stainless steel product there is not only technology, but also research, responsibility, and constant dialogue with those who choose us. This is how, day after day, we cultivate excellence.

solutions

WE LOVE THINGS DONE WELL

Every MPGAMMA product is the result of a customer-centric approach, based on **continuous improvement** and the possibility of **complete customization**.

For us, quality is never a one-time goal, but rather a pursuit that is renewed every day. That's why we constantly invest in technology and expertise to refine every stage of the process, from design to production, all the way to logistics. We love raising the bar even higher, ensuring high standards and the flexibility needed to meet the challenges of an evolving market.

Furthermore, customization is one of our hallmarks. In addition to a full range of standard solutions, we offer the option of designing custom cabinets and enclosures from scratch. We always start by listening to our customers and their needs, to ensure functional and reliable solutions that last over time. Because what we do is never simply "a product," but rather the expression of our understanding of excellence.

WITH A FOCUS ON INNOVATION

We have built an environment where human expertise meets automation, creating efficient and functional production that respects people and the planet. Innovation is the thread that holds together every part of this vision, and we express it in different ways.

PROCESS INNOVATION

We achieve this by investing in technology and digitalization. From robotic cells to automated vertical warehouses, we choose cutting-edge solutions that optimize every stage of production. They reduce time, waste, and operational complexity.

ORGANIZATIONAL INNOVATION

Which means focusing on people. Investing in training, offering professional growth paths, international exchange experiences, and a multicultural environment that now includes 14 different nationalities.

SUSTAINABLE INNOVATION

That is, combining productivity and respect for the environment, adopting practices and technologies that improve efficiency and reduce the impact of our activities. Because there is no future without responsibility.

It is in this combination that we recognize the true essence of progress, which drives us to grow and improve ourselves ever more.

WE TAKE CARE OF WHAT MATTERS MOST

Technical features are important, but we go beyond that. Our products embody the commitment of those who put themselves in the customer's shoes to provide concrete answers to their real needs.

reliability Those who seek **reliability** find it in quality raw materials, capable of ensuring durability and hygiene even in the most complex environments.

Those who require **safety** can count on certifications that meet the highest protection levels, ensuring enclosures ready to defend against liquids and foreign bodies. **safety**

ease of use **Ease of use** is guaranteed by a design that focuses on the end user, creating products that are simple to install, practical to use, and quick to maintain. Perfect in functionality and **design**, modern and meticulously detailed. **design**
Because even the eye counts.

tailor-made And when the challenge is non-standard, MPGAMMA rises to the occasion by offering **tailor-made solutions**, customized to the customer's needs, certified, and ready quickly. All this without losing sight of savings, because creating resistant and durable products means ensuring longer life cycles and **reducing maintenance costs**. **savings**

This is how we take care of what matters most to our customers, offering them the benefits they seek, appreciate, and continue to choose. Every day

WE PUT PEOPLE AT THE CENTER

We believe that a company's true strength is its people. That's why we've always been committed to creating a safe, inclusive work environment that values each employee, in the belief that professional and personal satisfaction always go hand in hand.

At MPGAMMA, health and safety are our priority.

Every day, we adopt preventative measures and promote responsible behavior to ensure a respectful and protected work environment. In 2024, we introduced new CE-certified machinery and equipment designed to improve safety in potentially hazardous processes. But our commitment doesn't stop there; we continue to invest every day to protect our employees and safeguard their well-being.

Putting people first also means believing in their growth.

We support ongoing and targeted training programs: safety courses for those working directly in the production process, management refresher courses for those in coordination roles, and personalized development programs based on skills and responsibilities. Because only through knowledge and continuous training can we successfully face the challenges of the future.

Our company policy reinforces this commitment. We promote equal opportunities, combat all forms of discrimination and harassment, and value respect, equity, and inclusion as founding principles of our culture. To protect, listen to, and value those who contribute to our growth every day.

OUR COMMITMENT

Our focus begins with energy efficiency.

Since **2013**, we've installed a **photovoltaic system to produce clean energy**, and have since implemented targeted measures to save and reduce consumption: LED lighting, timed systems, smart inverters, and new heating and cooling technologies.

In **2024**, we expanded the facility with the construction of a new plant, designed according to sustainability criteria, including **thermal insulation** and the **installation of energy-efficient equipment**.

Every year, we **implement efficiency projects** and progressively renew our machinery, adopting more modern and efficient solutions.

We also adopt a responsible approach when choosing raw materials.

The stainless steel we use is completely recyclable and reusable without losing its properties, and we favor local suppliers to enhance the local area and reduce transportation-related emissions.

But our commitment doesn't stop at the environment. We believe in social responsibility as an integral part of our identity.

- We collaborate with local schools and agencies for training and apprenticeships.
- We support educational initiatives.
- We promote sports through sponsorships that strengthen community ties.

All this is made possible by a forward-thinking corporate culture. In 2024, we established a **Sustainability Team** dedicated to ESG strategy, and at the beginning of 2025, we introduced an **Environmental Policy** to spread awareness and responsibility at all levels of the organization.

“ This is how we translate our commitment into reality. Because we believe that a sustainable future is built with concrete choices, day after day.

THE CONTEXTS WHERE WE MAKE A DIFFERENCE

Our stainless steel products are designed for the most demanding environments, where hygiene, durability, and safety are not options, but essential requirements. From industries requiring the highest standards to environments that tolerate no margin for error, our solutions support every sector with the same promise: to guarantee robustness, quality, and durability.

CERTIFIED QUALITY

Reliability is a commitment we demonstrate every day. Ours is recognized and guaranteed by a system of national and international certifications, which confirm compliance with the highest quality and safety standards.

UL CERTIFICATE OF CONFORMITY

According to the UL 508A standard, this certification ensures that industrial control panels (NITW) meet the safety standards required by the US and Canadian markets.

ISO 9001:2015 QUALITY CERTIFICATION

Issued by DNV-GL ITALIA and valid internationally, this certification certifies that the entire company organizational system guarantees the quality of operational processes: from research and development to production, from distribution to customer service.

ATEX CERTIFICATION

Guarantees that products comply with the safety requirements of the ATEX Directive 2014/34/EU for use in potentially explosive atmospheres, with the presence of gas or dust.

TÜV SÜD CERTIFICATION – STORAGE EQUIPMENT AND DEVICES

Ensures the conformity of empty enclosures intended for storage devices and equipment, validated through voluntary testing.

STS CERTIFICATION

Certifies that welding department operators are qualified according to the UNI EN ISO 14732:2013 and UNI EN ISO 9606-1:2013 standards.

IECEx CERTIFICATION

Valid worldwide, this certifies that CPN or SDN series empty enclosures comply with international standards for use in potentially explosive environments.

ENCLOSURES, BOXES, AND PUSH- BUTTON PANELS

■ The MPGAMMA line of enclosures, junction boxes, and push-button panels offers IP66, IP67, IP69, and IK10 protection, ensuring maximum durability and reliability in a variety of industrial environments. All models are designed for easy installation and cleaning, ensuring the highest levels of hygiene. They can be completed with accessories such as base plates, rain covers, fastening systems, ventilation, and cable glands.

PENDANT CONTROL UNITS, JOINTS AND SUPPORT SYSTEMS, CONSOLES

The MPGAMMA line of pendant control enclosures is designed to enclose and protect control devices close to the operator, ensuring IP66, IP69, and IK10 protection from external agents. Featuring an ergonomic design and easy to clean, it can be combined with stainless steel support arms of various shapes and sizes. Each item can be made to order, fully customized, and integrated with dedicated accessories.

COMPACT CABINETS

■ The MPGAMMA line of compact cabinets combines innovation, robustness, and ease of assembly. It features AISI 304L (Wnr. 1.4307) stainless steel structures designed to guarantee IP66, IP69, and IK10 protection even in the most critical environments, where hygiene and safety are paramount. Each model can be customized based on customer specifications and adapted to different application needs.

AIR CONDITIONERS FOR ELECTRICAL PANELS

■ We collaborate exclusively with Seifert to offer a complete range of industrial air conditioning solutions. This partnership is born from a shared vision and is expressed in the SLIMLINE PRO line.

Quick and easy to install, SLIMLINE PRO air conditioners for electrical panels consume up to 30% less energy than traditional systems. They are designed to ensure reliable performance even in extreme heat and provide advanced protection in any operating environment.

VENTILATION AND CABLE ENTRY SYSTEMS

■ We collaborate with Alfa Electric to integrate high-performance ventilation systems, such as the T-FAN models, appreciated for their compact design, quick assembly, and effective panel protection.

In the wiring sector, our partnership with the Detas Group guarantees advanced cable entry solutions, thanks to the DES (Detas Entry System), designed to simplify installation, improve performance, and reduce costs. We also integrate SKINTOP® cable glands from LAPP (Italy), in stainless steel or nickel-plated brass, ideal for industrial applications requiring superior performance.

TEAMWORK IS OUR PROMISE

Choosing MPGAMMA means having an ally at your side who is always there for you, with professionalism, expertise, and vision. A partner ready to listen, understand your needs, and transform them into concrete solutions. Because the secret to excellence lies in the relationships of trust we build day after day with those who choose us.

Our commitment is to offer long-lasting quality and solutions that always guarantee safety and reliability, whatever the challenge.

What's yours? Let's talk; we're here to team up.
